

Imagine...

...a stock trader works for you,
who works for you 24 hours a day,
who works consistently efficiently,
who never needs a break
who is not human.

Trade Robotic GmbH develops autonomously operating trading robots.

PROBLEM

High inflation devalues one's money.

Currently, low **interest rates** on the market are the rule.

It is difficult to **preserve value and make provisions** with existing instruments.

Trading on the financial markets is **complex and time consuming**.

SOLUTION

|| TRADE Robotic
Products for autonomous trading

Professional digital trading on financial markets.

24 hours/day trading without time expenditure.

The private client has **full control** over his money at all times.

No time-consuming training on digital trading systems necessary.

The private client get a trading robot **for rent**.

PRODUCT

The FXTraderPlus trading robot takes over the tasks of a professional stock trader, it receives, processes and analyzes price data.

FXTraderPlus identifies trading signals and makes trading decisions, it places orders on the market and monitors them during the entire term. Human errors are thus eliminated.

Analyst opinion:

Currently, the robo-advisor market is experiencing significant growth as an increasing number of consumers use automated investment advisory platforms.
....

Several factors are driving the growth of the robo-advisor market. One important factor is the rising demand for low-cost investment advice, as traditional financial advisors can be expensive and often require high minimum investment amounts. Another factor is the rise of tech-savvy millennials who prefer digital platforms for financial services. In addition, the COVID-19 pandemic has accelerated the shift to online financial services, including robo-advisors, as more consumers have turned to digital channels for their financial needs. The robo-advisor market is expected to continue to grow in the coming years. This growth will be driven by factors such as the increasing demand for low-cost investment solutions, the increasing popularity of passive investments, and the ongoing development of artificial intelligence and machine learning technologies.
